## CORRUGATOR

### ~ Bridge guide

This equipment allows us to guide all the corrugator's papers automatically and constantly at whichever line speed.

To this end, we use high-precision measuring bars.

The system is able to work individually towards the centre or in slave mode. Whilst in slave mode, the guide follows the paper liner's band; this mode allows for three guiding possibilities:

**Mode 1:** follow-up to centre.

**Mode 2:** follow-up to the right-hand corner.

**Mode 3:** follow-up to the left-hand corner.

Guiding is carried out by a motorised linear actuator that introduces the necessary corrections to keep the cardboard band within the established margins.
