the machine's features

CORRUGATOR

~ Preheater wrap

We incorporate motorised wrapping rolls in preheaters that do not have it. This retrofit allows for improving the paper's quality and reduces waste due to incorrectly formed sheets.

We carry out both the mechanical modification and the wrap control.

Wrap control may be of different types:

- Manual.
- By % speed.
- By temperature sensor.

Wrap control precision $\pm 1\%$ by speed control and $\pm 1^\circ\text{C}$ by temperature control.

With quick response of the system to the value programmed.
