PAPER

Paper reel division (AL-CUT)

AL-CUT is a machine that allows for trimming and rerolling especially tall or wide rolls to transform them into output rolls of the desired dimensions.

The materials that may be processed are paper and cardboard of between 80 gr/m² and 600 gr/m². Paper-based complex materials and other materials according to the tension of the machine's band.

The rolls are made by means of a tangential rewind.

AL-CUT comprises the following components:

- Rewinder.
- Band-pass roller.
- Rewinder head.
- Lengthwise cut group.
- Axial rewinder.
