Global Corrugated Engineering Solutions

Update and improvement of
the machine's features

CORRUGATOR

~ Single facer retrofit

AL-GAR retrofits both the mechanical and electronic side of any single facer. This improves its features, speed, control, etc.

Each retrofit is adapted to the requirements of each plant, according to the state of the single facer and the obsolescence of the electronic components.

Some of the retrofit's options are as follows:

- Load cells.
- Pressure groups.
- Automatic limiters controlled via LEDs.
- PLC replacement.
- Replacement of motors and inverter from DC to AC.
- Control software including recipes.
- Change of pneumatics for market components.
- Change of electronics for market components.
- Change of hand of the entire equipment.
