CORRUGATOR

~ Stacker input brushes

Group of brush bars combining different rod lengths and diameters for improved shingling, side squaring and sheet breaking control.

The system reduces power consumption compared to other systems using suction.

The system's main characteristics are as follows:

- Pressure of the brushes on the cardboard proportional to the line's speed.
- Electronically controlled pneumatic pressure system.
- Automatic selection of the brushes to be used depending on the sheet's measurement.
- Automatic brush elevation on carrying out the change of order with the entering of the last sheet.
- Adaptable to all machine widths.
